**Omnicia Selects the Adobe PDF Library from Datalogics to Get  
OmnieFile Products to Market Faster**

---

Chicago, IL - August 29, 2003— Omnicia, Inc. a global corporation dedicated to the development and delivery of software solutions and professional services that support drug development and regulatory submissions activities, has licensed the Adobe PDF Library from Datalogics for use within their OmnieFile products.

OmnieFile is an innovative, internet-deployed, modular software application for enterprises that streamlines the electronic compilation and submission of various filings to regulatory agencies worldwide.

Available on a subscription basis, OmnieFile manages the generation of compliant electronic regulatory documents for the biopharmaceutical industry. Submissions consisting of multiple PDF documents from multiple sources are assembled; new folio page numbers are assigned; TOCs, cross references and links are created and validated. Delays in the approval process which can result from non-compliant or incomplete electronic submissions can be avoided with the OmnieFile products. This allows Omnicia's customers to get their products approved and to market faster.

All facets of the OmnieFile application are modular and complement one another. Delivered via a secure Internet server, each software module is dedicated to a specific type of regulatory submission. This modular approach provides customers with a dynamic solution that can be easily adapted to their changing needs over the course of their corporate lifecycle, as well as their existing internal technology.

“Selecting the Adobe PDF Library from Datalogics was the obvious choice,” said Peachy Dimanlig, Chief Operating Officer for Omnicia Incorporated. “Our products are deployed in extremely high-volume, mission-critical environments. Our customers demand the highest level of reliability, and expect a certain level of performance. The Adobe PDF Library met or exceeded our expectations in all respects. In addition, embedding this Adobe technology into our solution also positions us very favorably to take advantage of future PDF enhancements as they become available.”

“PDF is the natural choice for electronic submissions, and OmnieFile will now be guaranteed Acrobat compatible, with all of the rich features supported by the PDF format”, said Kevin McNeill, VP Marketing at Datalogics. “Choosing the Adobe PDF Library will allow Omnicia to focus their engineering efforts on their core competencies in the regulatory compliance arena, while ensuring that the OmnieFile products are interoperable with other PDF based products and solutions.”

The Adobe PDF Library, developed by Adobe Systems, is a developer's toolkit that allows PDF files to be created directly from within other applications. It is ideal for use in document composition or transformation applications which require versatility to efficiently distribute information across multiple electronic plat-

forms while preserving page integrity. The Adobe PDF Library gives developers access to functionality that ensures quality document creation across multiple platforms. The Library allows developers to automatically conform to the highest PDF language standard through regular upgrades, and consistently provide desired output types.

## **About Omnicia**

Omnicia provides software solutions and professional services that shorten drug development and regulatory electronic submissions activities, dramatically reducing submission preparation costs and helping the pharmaceutical industry bring new drugs to the market faster.
